SOLUTION USED

Vote-by-Mail

*"The ClearVote system offered a high level of transparency in our last election with ease of use. The scanning process added an additional level of verification to our existing procedures. The target cards and ability to view ballots was especially helpful for the ballot processing judges. Clear Ballot's support team was very responsive to any questions throughout the election process." - **Christian Samora**, Town Clerk, Berthoud, Colorado*

The Clear Ballot Difference

Working Collaboratively With Our Customers

When Berthoud's Town Clerk was preparing for the 2024 municipal election, he wanted to find a voting technology provider that would help the town run a secure, efficient election at a reasonable cost. The town worked with Clear Ballot, who also provide certified voting systems in the State of Colorado, and were extremely happy with the level of support they received and the ease of use of the ClearVote system.

"The ClearVote system offers a high level of transparency with real ease of use," said Town Clerk Christian Samora. "The system makes it easy to explain to observers what is going on with ballot scanning and tabulating, and not having to manually duplicate ballots that were dirty or damaged was huge."

Clear Ballot provided Berthoud with assistance throughout the entire election process, including on-site support on Election Day, at half the cost of other quotes the town received. For Berthoud, having a partner that can help support municipalities and not exceed expected costs was crucial, allowing the town to stay within their yearly budget and tackle important projects.
